

SEED 2025:

Partnerships, Capital, and Knowledge for Delivery

"The future of climate and capital is being written in Africa."

Dr. Justin Dargin

Chairman's Foreword

Dear Colleagues and Friends,

SEED 2025 was not just a conference, it was proof of concept. Africa does not suffer from a deficit of ideas or innovation; it suffers from a deficit of platforms that can move those ideas from brilliance into bankability. SEED was built to close that gap. And on August 14, 2025, we showed the world that Africa's clean energy future is already being designed, tested, and financed by Africans themselves.

What unfolded across the day was remarkable. Youth leaders demonstrated that they are not waiting for permission to shape policy. Women entrepreneurs revealed business models already transforming access to power and opportunity. Innovators introduced technologies tailored to African realities, while global partners leaned forward to explore how capital, regulation, and enterprise can converge to unlock scale.

This was not dialogue for its own sake. Out of SEED came practical pathways:

- **Microgrids** that do more than provide light — they irrigate farms, power enterprises, and anchor resilient communities.
- **Incubators** that transform bright ideas into investable ventures.
- **Financing mechanisms** that put inclusion, gender equity, and community ownership at the center.

Our mandate now is unambiguous: carry this momentum into execution. The Sunrise Spectrum in northern Ghana, engineered down to the watt-hour, the liter of water, and the hectare of farmland, stands ready as the first of many Sunrise Villages across the continent. The Pan-African Climate Exchange is poised to channel carbon finance into communities too often excluded. Together, these initiatives embody our commitment to building scalable, community-anchored models that fuse clean energy, water security, and climate finance into a new infrastructure of resilience for Africa.

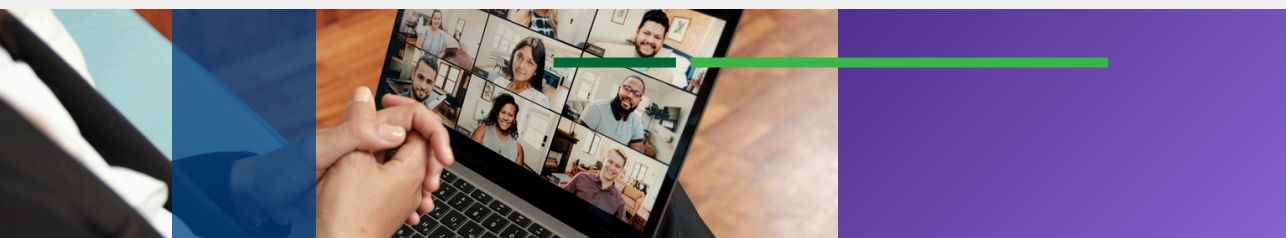

I want to thank every participant who lent their vision, voice, and commitment. You made SEED not a moment, but a movement. The work ahead will define the transition we seek: African-led, globally connected, rooted in justice, and powered by delivery.

With appreciation and resolve,

Justin Dargin

Catalyst for Action

On August 14, 2025, the SEED (Sustainable Energy, Entrepreneurship & Development) Conference convened a coalition of youth innovators, women entrepreneurs, policymakers, financiers, and technologists, united by a single mission: to accelerate Africa's clean energy future.

Conceived and convened by Tangelic, SEED was designed as a catalyst, not another conversation. It was the place where African ingenuity met global partnership, where dialogue was converted into delivery, and where inclusion was not an aspiration but the starting point.

The message that emerged was unmistakable: Africa's energy transition is not waiting to be imported, it is already being built by Africans themselves. From microgrids powering communities, to women-led enterprises reshaping access to finance, to youth leaders demanding a seat at the policy table, SEED showcased how the next wave of growth will be driven by African-designed solutions, globally reinforced.

Core Themes

Youth Leadership

Africa's young innovators are not the leaders of tomorrow — they are shaping policy, technology, and finance today.

Women's Leadership

Women entrepreneurs and advocates stood at the center, advancing business models that made equity and resilience inseparable.

Innovation & Entrepreneurship

From decentralized solar to clean cooking and digital platforms, SEED spotlighted ventures tailored to African realities and capable of scaling continent-wide.

Equity & Inclusion

Grassroots voices, often sidelined in global forums, anchored strategies for a just energy transition rooted in dignity and opportunity.

Through these lenses, SEED reinforced Tangelic's role as a trusted convener: the meeting point where local innovation and global capital converge to co-design Africa's future.

Strategic Architecture

Convening Model

SEED 2025 was delivered in a fully virtual format, integrating high-level plenaries, dynamic panel discussions, and immersive Action Labs. This approach ensured global accessibility across time zones while enabling deep collaboration and cross-regional exchange that mirrored the interconnected nature of the clean energy challenge.

Strategic Priorities

- Surface and spotlight scalable African-led clean energy solutions ready for deployment.
- Forge durable partnerships linking innovators, investors, policymakers, and grassroots leaders.
- Generate actionable roadmaps on gender equity, climate finance, and entrepreneurship, built to guide implementation beyond the event itself.

Global Coalition

SEED 2025 convened more than 80 participants from 20 countries spanning Africa, the Middle East, Europe, North America, Latin America, and Asia. Delegates represented a deliberate mix of academia, government, the private sector, philanthropy, and civil society. This diversity created a platform where technical expertise converged with lived community insight, producing dialogue that was both analytically rigorous and grounded in frontline realities. The result was a body of outcomes designed to be credible, inclusive, and investment-ready, positioning SEED as a launchpad for delivery at scale.

20

Countries

80+

Participants

Conference Convenor & Opening Welcome

Dr. Justin Dargin

Chairman of the Board, Tangelic

Keynote Speaker

Professor Namia Bohler-Muller

Divisional Executive HSRC/Head of Delegation W20SA

Innovations for Renewable Energy in Africa

Dr. Pius Oko

Regional Program Manager, GreenFaith Africa

Trent Billette

Entrepreneur and community leader

Fabian Sukulu

Business Development Manager at B Lab Africa

Gender Equity in the Green Sector

John Balankoo Sumbo

Executive Director, Green for Change Ghana

Meseret Haileyesus

CEO, Global Economic and Climate Justice | Equity-Centered Policy & Development

Women Leading the Way

Dr. Abena Engmann

Dean, Students and Community Affairs, Academic City University; Co-Founder, StradMed Innovation

Kezia Sanie

Founder and President of For The Future Ghana

Shahd Eltahir

Electrical Engineer and Researcher

Youth Leadership and Advocacy

Emmanuel Terwase

Founder & CEO, BoostPower

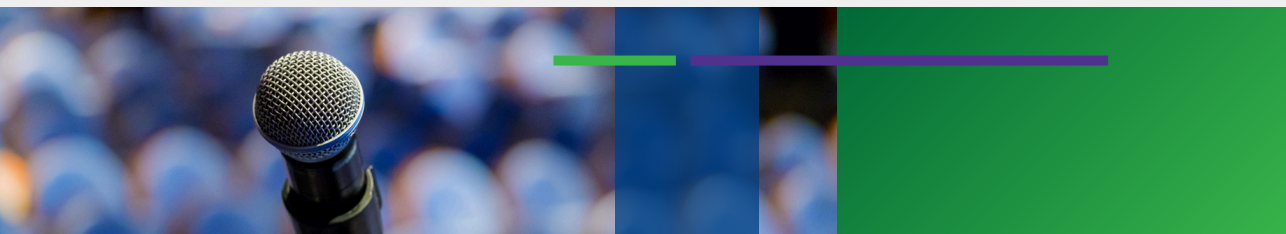

Dr. Tam Kemabonta

Co-Founder of Entric Power Systems

Michael Berko

Energy Consultant, Bridge Height Investment and Founder, Ahabanmono Impact

Dr. Zanele Matsane

Moderating Innovation in Clean Energy in Africa Panel

Choma Aninwe

Moderating Gender Equity in the Green Sector Panel

Nadiia Savchenko

Moderating Women Leading the Way Panel

Lynn Modester

Moderating Youth Leadership and Advocacy Panel

Action Lab Leads

Katileho Queen Mojakisane

Sustainable Futures Coordinator, Tangelic
Just Transition & Advocacy Action Lab Lead

Shams Khattak

Sustainability Finance Strategist, Tangelic
Climate Finance Action Lab Lead

SEED 2025

EMPOWER • TRANSFORM • INSPIRE

What SEED Delivered

Capital Pathways

- Early-stage partner commitments to explore financing for Sunrise Spectrum's 2026 deployment in northern Ghana, positioning it as a flagship Sunrise Village.
- New dialogues with funders on gender-inclusive finance models designed to expand capital for women-led enterprises.

Policy & Advocacy

- Youth and women leaders co-authored recommendations calling for mandatory grassroots consultation in national energy planning.
- Commitments to sustain advocacy through Tangelic Climate Cafés and the Pan-African Climate Exchange (PACE).

Entrepreneurship & Innovation

- Ventures presented at SEED — from decentralized microgrids to digital platforms — were flagged for support through incubation and mentorship pipelines.
- Action Labs produced pilot concepts integrating climate finance, innovation, and regulatory frameworks.

Community & Network Building

- SEED convened a transcontinental network of 80+ practitioners from 20 countries, strengthening ties across Africa, the diaspora, and global allies.
- Grassroots leaders were recognized as co-designers of Africa's energy transition, not passive stakeholders.

These outcomes are not isolated, they feed directly into Tangelic's flagship initiatives, the vehicles through which dialogue becomes delivery and momentum becomes scale.

Three Priority Tracks

SEED 2025 laid the foundation. The next phase is execution: converting ideas into systems, and systems into scale. The agenda moving forward is defined by three priority tracks:

Capital Deployment

- Secure financing for Sunrise Spectrum's 2026 launch, establishing a reference model for Africa's decentralized energy future.
- Position the Pan-African Climate Exchange (PACE) as a continental platform channeling climate finance into African-led solutions.

Policy & Investment Dialogues

- Convene project developers, policymakers, and financiers to surface bankable projects and align them with national and regional priorities.
- Unlock blended finance pathways that accelerate sustainable infrastructure deployment across Africa.

Collaboration & Partnerships

Tangelic calls on partners across finance, technology, and policy to co-develop solutions at scale. Whether through catalytic capital, technical expertise, or policy alignment, collaboration will determine both the pace and the reach of Africa's just energy transition.

SEED 2025 was not an endpoint, it was a launch. It demonstrated the power of convening, where African innovation meets global expertise, and vision moves into action.

Tangelic is shaping a movement, not a moment. The path ahead is clear: accelerate a just energy transition where opportunity, dignity, and resilience are within reach for every community across Africa.

“What matters now is delivery, projects advancing, capital flowing, and futures taking shape. SEED 2025 showed that momentum is no longer theory but practice.”
